

CASE STUDY

Ratoath Athletics Club

Ratoath, County Meath, Ireland

Ratoath Athletics Club in Ireland has recently expanded its facilities as part of a wider development at the site which included a new artificial turf pitch and extra tennis court. The club had an existing 6 lane 400m natural grass track around the perimeter of Ratoath Rugby Club's main pitch, but an all weather floodlight facility was required to enable all year round training.

To ensure the club's facilities could all be at one location, an uneven piece of land had to be built up, including the installation of full drainage and a retaining wall. This created an elevated, even area of **1,600m²** suitable for the creation of a 6 lane 100m sprint track and two field event practice areas.

Sports Ground Specialists were the chosen complete the project, and installed the specified **CONIPUR SP** track surfacing system.

CONIPUR SP

Water permeable spray coated athletics track system

13mm thick polyurethane track system, with a PUR-bound elastic layer based on recycled granules and a 3mm PUR spray coating as a top layer

Features:

- Ultra cost effective
- Water permeable
- Seamless and spike resistant
- Wide range of colours
- Fully tested to EN14877
- World Athletics certified
