

CONICA

CASE STUDY

Belfast Academy

Belfast, Northern Ireland

CONICA HG Re-top offers a cost-efficient and technically simple solution for the refurbishment of PUR coatings in sports halls.

This CONICA technology is based on many years of experience of a range of surface types in a variety of sports halls. A renovation can be carried out on polyurethane floors, as well as on prefabricated floor coverings such as linoleum or PVC without any problems. In addition, re-topping is an environmentally friendly solution because the existing sports floor is preserved, thus reducing disposal costs and waste. This has a positive influence on the lifecycle costs and still gives the athlete the desired performance of a new indoor sports floor.
