

CASE STUDY

Co-op Academy

Middleton, Manchester

As part of an £18 million pound extension to the main building, the Academy's sports facilities also received improvements.

The existing sports hall spanning 625m² received new CONICA sports flooring.

CONIPUR HG Eco 6+2mm point elastic was chosen for this project. During the installation the existing timber surface had to be lifted, a screen applied to bring the floor back up to the existing level and then the new CONIPUR HG Eco system was installed.

All of the sockets on the floor which support the sports hall's apparatus had to be reinstalled.

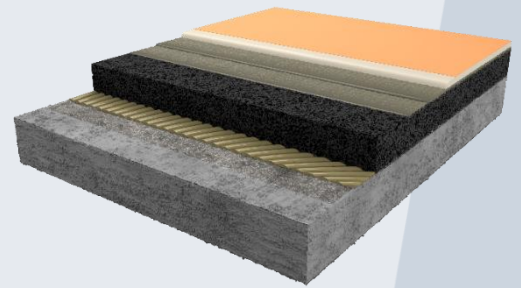

CONIPUR HG

A point elastic sports hall system, with options to meet any need.

Flexible polyurethane system installed in conjunction with a rubber underlay mat to create a system suitable for sports where sustained point loading occurs.

Characteristics:

- Impact absorbing point elastic system
- Wide range of options available
- Highly durable
- Seamless PU coating
- Low cost installation, minimal installation thickness
